

Shell Notes (revisited)

- `$PATH` : the variable of all env vars
- `>` redirect to `>>` append to
- the tee command : echo while write to the file at the same time (similar to echo ,input comes from stdin)
- The args in `.sh` is denoted by `$1` `$2`
- `touch` can be used to create a new file, but we have to change the state of it before we run it (`chmod +x`)
- to compare if two string is equal `if ["$1" = "Hello"]; then`
- to concatenate strings just put them together `"Hello ""World!"`
